

FormFlow — Product Requirements Document (Short)

Version: 1.0 Status: Draft Date: June 2026

1. What is FormFlow?

FormFlow is a no-code platform that lets anyone create forms, collect responses, and instantly turn that data into dashboards, records, and reports — all in one place, without any technical knowledge.

One-line pitch:

Collect data like Google Forms. Manage and visualize it like a pro. Zero technical skill required.

2. The Problem

Google Forms makes collecting data easy — but once responses arrive, users are stuck. To view charts, manage records, track status, generate reports, or automate follow-ups, they need to use multiple tools like spreadsheets, AppSheet, Zapier, or BI platforms. These tools are too complex for non-technical users.

Result: Users can collect data but cannot act on it.

3. The Solution

FormFlow handles the entire journey in a single platform:

- Create forms (drag-and-drop builder)
 - Collect responses (shareable link, embed, QR code)
 - See instant auto-generated dashboards (no setup)
 - Manage records (table, kanban, calendar views)
 - Generate reports (one click, PDF/Excel)
 - Automate follow-ups (no-code IF/THEN rules)
 - Collaborate with the team (roles, assignments, comments)
-

4. Three Roles

Role	Who They Are	What They Do
Super Admin	The FormFlow company / developer	Manages the entire platform, all client accounts, plans, billing, and templates
Admin	The client who subscribes to FormFlow	Creates forms, views dashboards, manages records, runs reports, invites team members
User	The end respondent	Opens a form link, fills it out, and submits — no account needed

5. Role 1 — Super Admin

The Super Admin operates the FormFlow platform itself. They do not create forms or touch form data.

Screens & Key Features:

Login

- Separate Super Admin login URL
- Mandatory Two-Factor Authentication (2FA)
- Account lockout after 5 failed attempts

Platform Dashboard

- Live KPI tiles: total Admins, total responses, MRR, active subscriptions
- Charts: Admin signups over time, responses over time, revenue trend
- Recent signups table and platform alerts panel

Admin Account Management

- View all Admin accounts in a searchable, filterable table
- Per-account actions: activate, suspend, delete, impersonate, change plan, reset password
- Manually create new Admin accounts

Plan Management

- Create and configure subscription plans (Free, Pro, Business, Enterprise)
- Set per-plan limits: forms allowed, responses/month, storage, team members, features

- View subscribers per plan, revenue, MRR, failed payments

Template Library

- Create, edit, and manage global form templates available to all Admins
- Organize templates by category
- Mark templates as "Featured"
- Track which templates are most used

Platform Settings

- Configure platform branding, sender email, SMTP, support links
- Enable or disable public Admin self-registration
- Manage internal Super Admin team members
- View and export full platform audit log

Announcements

- Send in-app banners to all Admins or specific segments
 - Schedule announcements for future dates
-

6. Role 2 — Admin (Client)

The Admin is the primary user of FormFlow. They have their own Workspace and can invite team members.

Screens & Key Features:

Signup & Login

- Email/password signup or Google OAuth
- Email verification required
- Password reset via email link

Onboarding (First Login)

- 3-step guided flow: profile setup → choose template or blank form → publish and share
- Skippable at any point
- Goal: Admin publishes their first form in under 5 minutes

Workspace Home

- Greeting with name and date

- Summary tiles: Total Forms, Total Responses, New Responses (7 days), Pending Records
- Form card grid with quick actions (Share, View Responses, Edit)
- Recent activity feed
- Response trend chart (last 30 days)

Form Builder — Build Tab

- Drag-and-drop field builder
- 18 field types: Short Text, Long Text, Multiple Choice, Checkboxes, Dropdown, Rating, Linear Scale, Date, Time, Number, Email, Phone, File Upload, Signature, Section Break, Page Break, Image, Statement
- Reorder fields by dragging
- Duplicate and delete fields
- Conditional logic: show/hide any field based on another field's value (AND/OR)
- Multi-page forms with Page Break fields
- Auto-save every 30 seconds

Form Builder — Design Tab

- Upload brand logo and cover image
- Custom accent color picker
- Font selection (curated Google Fonts list)
- 6 pre-built visual themes (one-click apply)
- Custom submit button label
- Live preview updates in real time

Form Builder — Settings Tab

- Form status: Active / Paused / Closed
- Password protection
- Response limit and submission deadline
- One response per device toggle
- Allow edit after submission toggle
- Progress bar, question numbers, randomize order toggles
- Custom confirmation message or redirect URL
- Email notifications: Admin alert on submission, respondent confirmation email

Form Builder — Share Tab

- Shareable link with copy button
- Embed code (iframe)
- QR code (downloadable PNG)
- URL parameter pre-fill builder
- Social sharing buttons (WhatsApp, Email)

Records — Table View

- All responses as rows, all form fields as columns
- System columns: Submission ID, Date, Status, Assigned To, Tags
- Sort, search, filter (multi-condition with AND/OR)
- Save named filter presets
- Inline status update
- Bulk actions: change status, assign, tag, export, delete
- Export to CSV or Excel

Records — Record Detail Panel

- Slides in from the right on row click
- All field values, submission metadata (date, device, browser)
- Status selector, Assigned To picker, Due Date, Priority, Tags
- Internal notes (team-only)
- File attachments
- Comment thread with @mentions
- Full activity log for this record
- Previous/Next record navigation

Records — Kanban View

- Cards organized by status columns
- Drag cards between columns to update status
- Click card to open Record Detail Panel
- Add/collapse columns

Records — Calendar View

- Records mapped to any date field
- Month / Week / Day views
- Click record to open detail panel

Records — Gallery View

- Card grid layout with image thumbnail (from file upload fields)
- Sort and filter same as table view

Dashboard (Auto-Generated)

- Created automatically on first response — zero setup
- Summary stat cards: Total Responses, Completion Rate, Avg Completion Time
- Auto chart type per field: word cloud, bar chart, pie chart, line chart, stat cards
- Date range filter and field-value filter
- Click chart → drill down to filtered records
- Download any chart as PNG

Custom Dashboard Builder

- Add custom dashboard tabs per form
- Drag-and-drop widgets (bar, line, area, pie, donut, stat card, word cloud)
- Resize and reorder widgets
- Add text/heading widgets

Reports

- One-click PDF report (summary + charts + records table)
- Export to Excel or CSV
- Custom report title and branding
- Shareable read-only report link
- Scheduled reports: auto-email PDF/Excel on daily/weekly/monthly schedule

Automation Builder

- Visual IF/THEN no-code builder
- Triggers: new submission, specific answer selected, status changed, assigned to member, date field reaches today, response count reaches number
- Actions: send email (with template + merge fields), send in-app notification, update status, assign record, add tag, send webhook, create Google Sheet row
- Chain multiple actions under one trigger
- Test Run button (executes with latest record as sample)
- Automation run log

Team Management

- Invite members by email
- 5 workspace roles: Owner, Admin, Editor, Viewer, Form Manager
- Change roles, remove members
- View member activity and assigned record count

Workspace Settings

- Workspace name and logo
 - Default timezone and language
 - Custom status labels (used across all forms)
 - Plan usage overview (forms, responses, storage, members)
 - Billing management (upgrade, downgrade, invoices)
-

7. Role 3 — User (Form Respondent)

The User only interacts with the public form page. They have no account and see no Admin interface.

Screens & Key Features:

Form Landing Page

- No login required — opens directly via shared link
- Shows form logo, title, description, and cover image
- Password prompt if Admin has protected the form
- Friendly message if form is closed or response limit reached

Form Filling

- All 18 field types rendered cleanly and accessibly
- Conditional fields appear/disappear dynamically as User fills in the form
- Required field validation with clear inline error messages
- Progress bar shown on multi-page forms
- Full mobile responsiveness (min 320px width, 44px+ touch targets)
- Works on: Chrome, Safari, Firefox (desktop + mobile)
- Partial save: "Save and continue later" sends resume link to User's email (if Admin enables)

Submission Confirmation

- Success screen with icon/animation and thank-you message
- Auto-redirect to URL if Admin has configured one
- "Edit my response" or "Submit another response" buttons if enabled by Admin

Confirmation Email

- Sent within 60 seconds of submission (if Admin enables)
- Includes form name, thank-you message, summary of submitted answers, timestamp

Accessibility

- WCAG 2.1 Level AA compliant
- Fully keyboard-navigable
- Screen reader compatible (proper HTML labels)
- Color is never the only indicator — icons and text labels also used
- RTL text support for Arabic, Hebrew, Farsi

8. Core Feature Summary

Feature	Super Admin	Admin	User
Platform dashboard	✓	✗	✗
Manage client accounts	✓	✗	✗
Manage subscription plans	✓	✗	✗
Global template library	✓	✗	✗
Create & publish forms	✗	✓	✗
View auto dashboards	✗	✓	✗
Manage records (table/kanban/calendar)	✗	✓	✗
Generate reports	✗	✓	✗
Build automations	✗	✓	✗
Invite team members	✗	✓	✗
Fill and submit forms	✗	✗	✓

Feature	Super Admin	Admin	User
Receive confirmation email	✗	✗	✓

9. MVP Scope (First 12 Weeks)

Super Admin MVP

- Login with 2FA, Admin account list, basic platform stats, plan viewing

Admin MVP

- Signup, onboarding, workspace home, form builder (10 field types, basic conditional logic), form settings, share link, records table, record detail panel, auto dashboard (5 chart types), one-click PDF report, team invite (3 roles), basic automations (2 triggers, 2 actions)

User MVP

- Form filling (10 field types), mobile responsive, validation, confirmation screen, confirmation email

10. Roadmap (After MVP)

Phase	Timeline	What's Added
Phase 2	Weeks 13–20	Kanban, Calendar, Gallery views, full automation builder, custom dashboard builder, scheduled reports, Google Sheets integration, Zapier/Make connectors
Phase 3	Weeks 21–32	AI report summaries, sentiment analysis, drop-off analytics, approval workflows, REST API, Stripe payments, template marketplace
Phase 4	Weeks 33–52	Mobile app, offline forms, SSO/SAML, white-label, HIPAA compliance, multi-form dashboards

- Web-based SaaS, no software installation required
 - Admin app: Single Page Application (SPA)
 - User form pages: Server-Side Rendered (SSR) for fast load
 - Multi-tenant architecture — all workspace data fully isolated
 - TLS 1.2+ encryption in transit, AES-256 at rest
 - File storage on cloud object storage (CDN-served)
 - GDPR compliant — data deletion tools included
 - Target uptime: 99.9%
 - Form page load time: under 2 seconds on 4G mobile
 - Form submission response time: under 1 second
-

12. Integrations

Integration	Purpose
Google Sheets	Sync responses to a Google Sheet in real time
Google Drive	Auto-export reports to Drive on a schedule
Google Calendar	Create calendar events from form date fields
Stripe	Accept payments inside forms
Zapier	Connect to 5,000+ external apps
Make (Integromat)	Advanced workflow automation
Slack	Notifications on new responses or status changes
REST API	Custom integrations for developers
Webhooks	Real-time event delivery to external systems
